Mr. Dan Repay  
Little Calumet River Basin Development Commission  
900 Ridge Road, Suite H  
Munster, IN 46321

Dear Mr. Repay,

The Chicago District performed a site visit of the Munster, Hammond, and Hammond Forest Ave Levee segments on June 5-7. The Chicago District performed a formal inspection of the Marshalltown Levee segment and a special inspection of the INDOT segment on April 8. The purpose of the U.S. Army Corps of Engineers (Corps) Levee Safety Program is to make sure levee systems are reliable and do not present unacceptable risks to the public, property, or the environment, with the emphasis on public safety. Two important principles that guide our program are the shared responsibility among partners at all levels for levee safety and the need for continuous and periodic project inspections and assessments. More information about the Levee Safety Program can be found in EC 1165-2-218.

This project has demonstrated its importance in reducing flood risk to the area. The Munster Levee System protects 4,668 people and $751 million worth of property, the Hammond Levee System protects 23,634 people, and $2.19 billion worth of property, and the Hammond Forest Ave Levee System protects 367 people and over $49.8 million worth of property. The Marshalltown Levee System protects about 425 people and almost $43 million worth of property and the INDOT non-project segment is part of the Gary Levee System which protects about 7,950 people and over $1.25 billion worth of property. The annual damages prevented reported for fiscal year 2022 was over $107 million for the Little Calumet River Project. The entire project has prevented cumulative flood damages of $1.2 billion since construction. The overall risk of the Munster, Hammond Forest Ave Levee, Marshalltown, and INDOT is considered low. The overall risk of the Hammond Levee is considered moderate.

The enclosed site visit reports provide a summary of the condition of the levee. The reports consists of descriptions with photos taken during the inspection, the eligibility checklist, and a map showing the locations of areas for your attention. The report will be posted to the National Levee Database (NLD) at https://levees.sec.usace.army.mil/ and available to the public.

A formal inspection is performed approximately every 5 year and provides ratings for each of the project features. The enclosed deliverables include the
standard Inspection Checklist with photos taken during the inspection and a map showing the locations of areas for your attention; the draft Levee Risk Management Summary (LRMS) which highlights the risks to focus your efforts on for maintenance, and the Levee Fact Sheet which summarizes the results from the last risk assessment. The LRMS will be finalized after the next levee screening in 2025. The inspection report will be posted to the National Levee Database (NLD) at https://levees.sec.usace.army.mil/ and available to the public.

Based on our findings, the previous rating of Minimally Acceptable for the levee segments will not change. There are still issues with the INDOT segment that can impact performance but does not impact eligibility since it is a non-project segment. The project will continue to remain Active in the P.L. 84-99 Rehabilitation Program and eligible for federal rehabilitation assistance for items rated M or A. Eligibility determination is based on the USACE Interim Policy for Determining Eligibility Status of Flood Risk Management Projects for the Rehabilitation Program Pursuant to P.L. 84-99. It is the Local Sponsor’s responsibility to monitor the Project during high water storm events to assess project performance and inspect after storm subsidence to record any storm-related project damage. The Local Sponsor must immediately report storm-related project damage to the Corps within 30 days so that the Corps may evaluate required repair reimbursement eligibility under the P.L. 84-99 Rehabilitation Program. The non-project segments are not included in this program.

Camera inspections are required to be performed every 5 years. The U.S. Army Corps of Engineers (USACE) Engineer Manual (EM) 1110-2-2902, Conduits, Pipes, and Culverts Associated with Dams and Levee Systems provides guidance for many aspects of culverts and pipes through levees, especially: Inspections (frequency, methods [CCTV, sonar], and third-party pipes); and Repair and Rehabilitation (routine maintenance, slip-lining, etc). The manual can be found at: https://www.publications.usace.army.mil/Portals/76/Users/182/86/2486/EM%201110-2-%202902a.pdf?ver=6N64KR0I3D2lmoG3X1LFhg%3d%3d. The frequency for future inspections will be determined by the pipe’s condition assessment rating. The sponsor’s method for visual inspection will be required to follow the updated guidance.

Deficiencies noted in the report should be addressed to ensure significant performance problems do not develop. We remain available to discuss the deficiencies and appropriate repairs measures or other technical questions that you may have. Please be sure to coordinate with our office to have any work near the levee reviewed and approved before allowing any work to proceed. Our reviews are to ensure the integrity of the levee is not compromised by the proposed work and the levees will continue to function as designed. Alterations will be reviewed under the Section 408 program.
It is important that the community be continually informed that the levee is only part of an overall plan to manage their risks from flooding from the Little Calumet River. Please continue to engage the community about the purpose of the levee and the project. Please reach out if you need assistance with outreach.

We recognize and appreciate your ongoing efforts to operate, maintain and improve the Little Cal Project. Your commitment to ensuring the levee system continues to perform as designed for your community reflects highly upon you and your staff. We appreciate the time and courtesy extended to our representatives during the inspection. We look forward to continuing to work together in ensuring this project continues to provide protection. We are available to discuss any technical questions about the operation and maintenance and inspection requirements. We will coordinate with you regarding the next site visit planned for the spring of 2023. Please contact the Levee Safety Program Manager, Yuki Galisanao (312-846-5458), or myself if you have any questions.

Sincerely,
Michelle Kozak, PhD
Chief of Emergency Management
Chicago District
